BUSINESS ANALYST HIGHLIGHTS

Business Analyst with experience supporting technology platform change through stakeholder engagement, requirements gathering, current and future state analysis, process mapping, UAT, Agile delivery and data-driven problem solving. Skilled at translating business and customer needs into user stories, acceptance criteria, process improvements and actionable documentation to support project outcomes.

- Developed and refined 15+ user stories and 40+ acceptance criteria across six epics using Agile methodologies and stakeholder collaboration, improving requirement clarity and supporting another sprint delivery.
- Supported UAT, usability testing and issue triage using Jira across live and project environments, helping identify defects early and contributing to smoother production releases and improved user experience.
- Analyzed platform usage metrics, customer feedback and operational trends using Excel, Power BI and reporting dashboards to identify UX and process improvement opportunities, supporting more informed product and business decisions.
- Partnered with developers, designers and stakeholders using Human-Centered Design principles to analyze user needs, refine requirements and deliver accessibility-focused product improvements.

SKILLS: Business Analysis | Requirements Gathering | Stakeholder Engagement | Process Mapping | BPMN| UAT | Jira | Agile Scrum | Excel | Power BI |Python |Java |SQL

EDUCATION

MONASH UNIVERSITY MELBOURNE, VIC

Bachelor of Information Technology *February 2024 – December 2025*

Major: Business Information Systems | Minor: Data Science

Relevant Coursework: Systems Analysis & Design, Usability Engineering, Industry Experience Studio, Data Analytics

EXPERIENCE

DIGITAL MINING TWIN PROJECT MELBOURNE, VIC

Data Analyst *June 2026*

- Engineered an end-to-end Python data pipeline and optimized SQL Star Schema to automate real-time feature engineering, processing high-frequency geospatial (GIS) and asset telemetry data for predictive modeling.
- Developed and deployed a Random Forest predictive workflow using Scikit-Learn to forecast real-time machine failure risks; integrated Explainable AI (XAI) weights to transition fleet operations from reactive maintenance to proactive spatial mitigation.
- Built a high-performance interactive UI using Plotly and Python web frameworks to monitor live spatial yield schedules and environmental impacts; designed the backend logic to align operational metrics with a $99K AUD revenue leakage audit.
- Hardened application reliability and REST API integration pathways using defensive programming; engineered robust containerization-ready code that eliminated database locking and optimized performance for hybrid cloud deployment.

GRAD CAREERS MELBOURNE, VIC

Data Analyst *April 2026 – Present*

- Developed 4 Power BI dashboards (HR, Sales, Finance, Customer Segmentation) by integrating Excel datasets and designing 6+ interactive visuals per dashboard, enabling data-driven decisions across business functions.
- Conducted data cleaning, outlier detection, and transformation in Power Query Editor; ensured accurate data types and resolved missing values to enhance report quality and reliability.
- Developed custom DAX measures for performance KPIs such as attrition rates, top 10 customers, sales by region, profit margins, and customer segment distribution improving visibility for over 200 users.
- Delivered analytical summaries and recommendations from dashboards, allowing HR to identify attrition hotspots, sales leaders to prioritize key accounts, and finance managers to track profitability and revenue growth.
- Validated dashboard outputs against source Excel datasets, investigated reporting discrepancies, and refined KPI calculations to improve accuracy, consistency and stakeholder confidence in recurring business reports.

HAILO MELBOURNE, VIC

Business Analyst *April 2026 – Present*

- Analysed 60+ platform issues and user-reported incidents per month to identify recurring defects, process gaps and user experience risks, contributing to product improvements that reduced repeat issues by 20%.
- Collaborated with developers and designers across multiple Agile sprint cycles, refining requirements, supporting feature prioritization, and contributing to the delivery of enhancements that improved platform usability and reduced user friction**.**
- Analyzed 100+ user feedback entries, app usage trends, and operational incidents using Excel and Power BI to identify recurring UX pain points and platform inefficiencies, generating recommendations that informed feature improvements, enhanced user experience, and contributed to smoother operational workflows.
- Supported accessibility and UI/UX improvement initiatives by translating user feedback and W3C requirements into testable enhancements, contributing to a 15% improvement in task completion and user interaction outcomes.

HAILO | MONASH UNIVERSITY MELBOURNE, VIC

Business Analyst *June 2025 – December 2025*

- Delivered 15 user stories and 40+ acceptance criteria across 6 epics, translating business and accessibility requirements into structured deliverables that improved sprint readiness and reduced requirement ambiguity across the development team.
- Collaborated within a cross-functional Agile team across 5+ sprint cycles**,** supporting iterative feature delivery and contributing to faster issue resolution and stronger alignment between technical and business stakeholders.
- Converted accessibility and W3C requirements into measurable validation criteria, embedding inclusive design principles into development and testing workflows to support improved usability, accessibility compliance, and a more seamless user experience.
- Supported deployment monitoring, defect tracking, and issue resolution through AWS Amplify and Jira, assisting with the identification and resolution of production issues and contributing to a more stable and reliable release process.

OTHER EXPERIENCE

MONASH DATA & AI SOCIETY MELBOURNE, VIC

Marketing Officer *September 2024 – July 2025*

- Planned and executed 10+ digital marketing campaigns across Instagram, Facebook, and TikTok, promoting society events and initiatives through targeted content strategies that increased engagement by 20% and strengthened organizational visibility.
- Leveraged social media analytics dashboards and Excel reporting to analyze views, clicks, reach, and engagement trends, generating insights that informed content optimization and supported data-driven campaign decisions.
- Coordinated promotional activities for 20+ events, collaborating with cross functional teams to improve outreach effectiveness and drive stronger attendance outcomes.

MONASH DANCE SOCIETY MELBOURNE, VIC

Treasurer *September 2024 – July 2025*

- Managed a $25,000+ society budget and processed approximately 100 financial transactions monthly, maintaining high accuracy across approvals, reconciliation, and financial reporting.
- Led budgeting, payment tracking and vendor coordination activities supporting 25+ society events, ensuring timely execution and operational efficiency.
- Analyzed spending trends and budget performance to identify cost-saving opportunities and support data-driven financial planning decisions.
- Produced regular financial reports and expenditure analyses, translating complex financial data into actionable insights to support strategic planning and resource allocation.

IKEA SPRINGVALE MELBOURNE, VIC

Customer Coworker *October 2024 – Present*

- Resolved 60+ customer cases per shift by leveraging CRM systems, structured troubleshooting processes, and collaboration with internal teams, ensuring timely issue resolution, accurate case documentation, and a high standard of customer service.
- Worked cross-functionally with sales, logistics, warehouse and customer service teams to investigate fulfilment issues, reconcile customer/order information and support timely operational resolution in a fast-paced retail supply chain environment.
